

Duro Flash

The smart replacement for road flares

The biggest advantage of the Duro Flash is the affordability it brings. We all know that we need to get away from open flames and hazmat issues when out on the side of the road. With Duro Flash you can secure a sight for a much longer time than a regular flare and you do not have to worry about the flare rolling or blowing into the underbrush on the side of the road and causing a whole new set of problems.

The Duro Flash was made with longevity in mind. It has no switches or moving parts to break off or become damaged. It is water and weather proof. The battery will last for 4 hours between charges. A Lithium Battery is being used similar to the one in a cell phone so the battery will fully recharge whether you use the Duro Flash for 10 minute or 3-1/2 hours. The on / off switch has been incorporated into the recharger design to make it fool proof. The only way to turn it off is to put it back in the recharger. If you are working a DUI check point and someone picked one up from the road they would not be able to turn it off and odds are your officer would be able to see it blinking in the car and be able to get the Duro Flash back.

Size - The Box is black with l.e.d.s on the outside to show when the Duro Flash inside is fully recharged. The box is 9.5" x 5.5" x 5.5" excluding handle. The weight of the empty box is 1.5 lbs. and the full box is 7.7 lbs. There are two charging cords included, one for AC and one for DC charging in a vehicle.

Flare - The Duro Flash unit itself is 4" x 4" x 3/4". They are cast aluminum alloy for extra strength and have been tested up to 20,000 lbs. Each Duro Flash weighs just under 1 lb.
